

BEPS Engineering & SITEC announce their collaboration on the Italian market for IntervalZero products.

BEPS Engineering becomes the support & training centre for IntervalZero's RTX software in Italy

Turin, Italy, May 11, 2009

BEPS Engineering, a Windows® Embedded Silver Partner, with head-quarter in Turin, and SITEC, Windows® Embedded Partner and specialised supplier of products and services for Industrial Automation in the Italian market, announced today a collaboration aimed to assist Italian OEMs to achieve the best results in their integration of IntervalZero's RTX software in Italy.

BEPS Engineering provides: products, system buildings, training, consultancy and applications for Windows® Embedded system solutions. BEPS Engineering also works in close collaboration with Microsoft Innovation Center Turin to promote Windows® Embedded technology awareness and expertise within academy and industry.

Since 1994, Sitec S.r.l. is a specialised supplier of products and services for Industrial Automation in the Italian market. The traditional well established activity of automation products distribution has been expanded with a new division of the company specialised in PC-Based Control applications. With a complete portfolio of products and a team of experienced professionals, Sitec is able to support its customers along the whole process of designing, developing and deploying their PC-based control solution, providing components, training and technical support.

IntervalZero's RTX software allows embedded systems developers to take advantage of the Windows® environment and form factor, and also solve their scheduling, prioritization and control challenges.

Thanks to the agreement between BEPS Engineering and SITEC, Italian OEMs now can take advantage from a local competence centre for IntervalZero RTX software solutions, providing technical support, training courses, application development, etc ...

“Having a long time experience with Windows® Embedded CE, the only Microsoft native RTOS, we can increase SITEC offer strategy providing RTX based solutions for Windows Embedded operating systems” commented Beppe Platania, CEO of BEPS Engineering. “In this new role, we can provide RTX customers with the technical support, training, services and applications they need” he added.

“This agreement with BEPS Engineering allows us to complete with a rich range of specialised services our offer of PC-based control solutions” adds Andrea Pichetto, Sales Manager of IntervalZero products, “Training, technical support and application consulting are essential to maintain and increase our wide base of RTX applications in Italy.”

About BEPS Engineering

BEPS Engineering was born in 2006 to offer its customers: products, system buildings, training, consultancy and applications for embedded system solutions. Most of our engineers have more than 25 years of experience in Embedded Operating systems, real-time applications, LAN and communication protocols. They have been Microsoft Windows® Embedded Partner from 1998. A Microsoft Embedded Silver Partner and Registered Training Provider, BEPS Engineering is a leading source of expertise in all Windows® Embedded operating systems. BEPS Engineering is based in Turin, Italy. www.bepseng.it

About Sitec

Sitec S.r.l., founded in 1994, developed a great experience supplying components and systems for the complex Industrial Automation market. Manufacturers of plants and machines (OEMs), System Integrators and end users look for suppliers to count on for long time, with a wide range of products, knowledge about real applications and structured to provide all the necessary support; Sitec is such a supplier.
